

# MM54HC192/MM74HC192 Synchronous Decade Up/Down Counters

# MM54HC193/MM74HC193 Synchronous Binary Up/Down Counters

## General Description

These high speed synchronous counters utilize advanced silicon-gate CMOS technology to achieve the high noise immunity and low power consumption of CMOS technology, along with the speeds of low power Schottky TTL. The MM54HC192/MM74HC192 is a decade counter, and the MM54HC193/MM74HC193 is a binary counter. Both counters have two separate clock inputs, an UP COUNT input and a DOWN COUNT input. All outputs of the flip-flops are simultaneously triggered on the low to high transition of either clock while the other input is held high. The direction of counting is determined by which input is clocked.

These counters may be preset by entering the desired data on the DATA A, DATA B, DATA C, and DATA D inputs. When the LOAD input is taken low the data is loaded independently of either clock input. This feature allows the counters to be used as divide-by-n counters by modifying the count length with the preset inputs.

In addition both counters can also be cleared. This is accomplished by inputting a high on the CLEAR input. All 4 internal stages are set to a low level independently of either COUNT input.

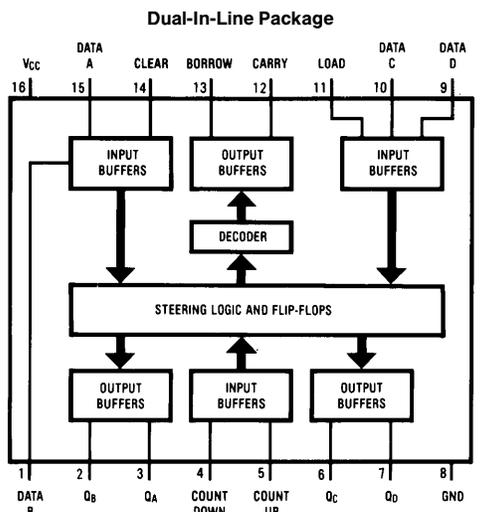

Both a BORROW and CARRY output are provided to enable cascading of both up and down counting functions. The BORROW output produces a negative going pulse when the counter underflows and the CARRY outputs a pulse when the counter overflows. The counters can be cascaded by connecting the CARRY and BORROW outputs of one device to the COUNT UP and COUNT DOWN inputs, respectively, of the next device.

All inputs are protected from damage due to static discharge by diodes to  $V_{CC}$  and ground.

## Features

- Typical propagation delay, Count up to Q: 28 ns
- Typical operating frequency: 27 MHz
- Wide power supply range: 2-6V
- Low quiescent supply current: 80  $\mu$ A maximum (74HC Series)
- Low input current: 1  $\mu$ A maximum
- 4 mA output drive

## Connection Diagram

TL/F/5011-1

**Order Number MM54HC192/193 or MM74HC192/193**

## Truth Table

| Count |      | Clear | Load | Function   |
|-------|------|-------|------|------------|
| Up    | Down |       |      |            |
| ↑     | H    | L     | H    | Count Up   |
| H     | ↑    | L     | H    | Count Down |
| X     | X    | H     | X    | Clear      |
| X     | X    | L     | L    | Load       |

H = high level

L = low level

↑ = transition from low-to-high

X = don't care

## Absolute Maximum Ratings (Notes 1 & 2)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

|  |                         |
|--|-------------------------|
| Supply Voltage ( $V_{CC}$ )                      | -0.5 to +7.0V           |
| DC Input Voltage ( $V_{IN}$ )                    | -1.5 to $V_{CC} + 1.5V$ |
| DC Output Voltage ( $V_{OUT}$ )                  | -0.5 to $V_{CC} + 0.5V$ |
| Clamp Diode Current ( $I_{IK}, I_{OK}$ )         | $\pm 20$ mA             |
| DC Output Current, per pin ( $I_{OUT}$ )         | $\pm 25$ mA             |
| DC $V_{CC}$ or GND Current, per pin ( $I_{CC}$ ) | $\pm 50$ mA             |
| Storage Temperature Range ( $T_{STG}$ )          | -65°C to +150°C         |
| Power Dissipation ( $P_D$ ) (Note 3)             | 600 mW                  |
| S.O. Package only                                | 500 mW                  |
| Lead Temp. ( $T_L$ ) (Soldering 10 seconds)      | 260°C                   |

## Operating Conditions

|  | Min | Max      | Units |
|--|-----|----------|-------|

|          |                                   |   |          |                             |           |                              |                   |         |  |
| $I_{IN}$ | Maximum Input Current             | $V_{IN} = V_{CC}$ or GND  | 6.0V     |                             | $\pm 0.1$ | $\pm 1.0$                    | $\pm 1.0$         | $\mu A$ |  |
| $I_{CC}$ | Maximum Quiescent Supply Current  | $V_{IN} = V_{CC}$ or GND<br>$I_{OUT} = 0 \mu A$                                     | 6.0V     |                             | 8.0       | 80                           | 160               | $\mu A$ |  |

**Note 1:** Absolute Maximum Ratings are those values beyond which damage to the device may occur.

**Note 2:** Unless otherwise specified all voltages are referenced to ground.

**Note 3:** Power Dissipation temperature derating — plastic "N" package: -12 mW/°C from 65°C to 85°C; ceramic "J" package: -12 mW/°C from 100°C to 125°C.

**Note 4:** For a power supply of  $5V \pm 10\%$  the worst case output voltages ( $V_{OH}$  and  $V_{OL}$ ) occur for HC at 4.5V. Thus the 4.5V values should be used when designing with this supply. Worst case  $V_{IH}$  and  $V_{IL}$  occur at  $V_{CC} = 5.5V$  and 4.5V respectively. (The  $V_{IH}$  value at 5.5V is 3.85V.) The worst case leakage current ( $I_{IN}$ ,  $I_{CC}$ , and  $I_{OZ}$ ) occur for CMOS at the higher voltage and so the 6.0V values should be used.

\*\* $V_{IL}$  limits are currently tested at 20% of  $V_{CC}$ . The above  $V_{IL}$  specification (30% of  $V_{CC}$ ) will be implemented no later than Q1, CY'89.

**AC Electrical Characteristics**  $T_A = 25^\circ\text{C}$ ,  $V_{CC} = 5.0\text{V}$ ,  $t_r = t_f = 6\text{ ns}$ ,  $C_L = 15\text{ pF}$  (unless otherwise specified)

TL/F/5011-3

## Logic Waveforms

### 'HC192 Synchronous Decade Counters Typical Clear, Load, and Count Sequences

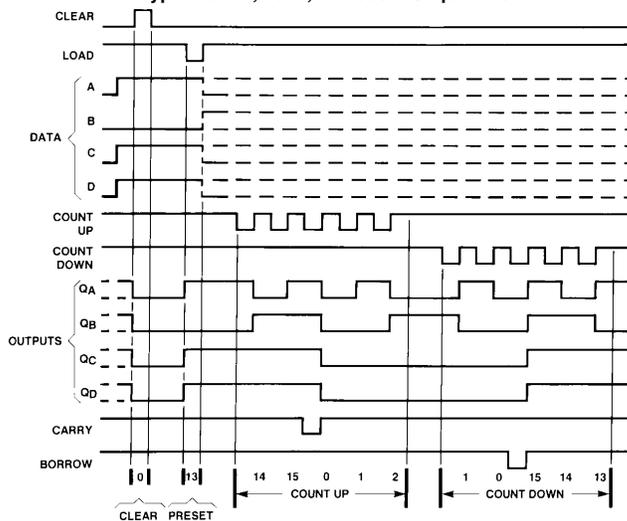

TL/F/5011-4

#### Sequences:

- (1) Clear outputs to zero
- (2) Load (preset) to BCD seven.
- (3) Count up to eight, nine, carry, zero, one and two.
- (4) Count down to one, zero, borrow, nine, eight, and seven.

### 'HC193 Synchronous Binary Counters Typical Clear, Load, and Count Sequences

TL/F/5011-5

#### Sequence:

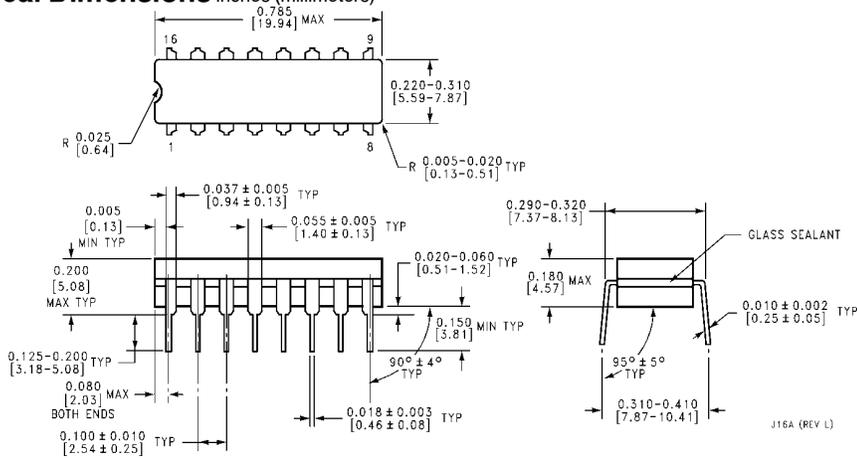

- (1) Clear outputs to zero.
- (2) Load (preset) to binary thirteen
- (3) Count up to fourteen, fifteen, carry, zero, one, and two.
- (4) Count down to one, zero, borrow, fifteen, fourteen, and thirteen.

**Note A:** Clear overrides load data, and count inputs.

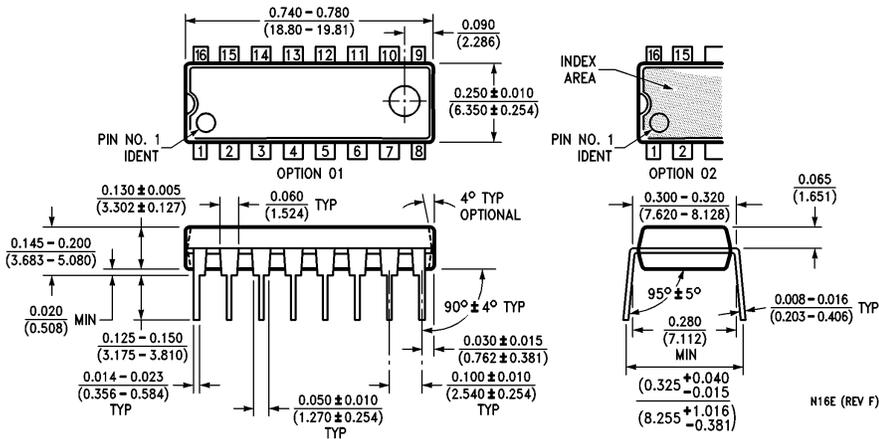

**Note B:** When counting up, count-down input must be high; when counting down, count-up input must be high.

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
